LAMPIZATOR

we have been making music sound better since 2009

We are a privately owned family business from Poland.

Our application of vacuum tube technology to digital-to-analog conversion (DAC) has made us famous for our fanatical, unorthodox approach to great sound.

We dare to be different.

Amber DAC is our full-featured **DAC** with everything you could ask for: tube power supply and rectification, choke filtering, dual-triode analog and conversion stages, copper capacitors, Engine Eleven, native DSD512, and much more.

Baltic DAC is llike the Amber on steroids, with larger premium tubes proudly on display. Its output buffers provide low output impedance, allowing it to comfortably drive virtually any load. Every variant is fully balanced.

Atlantic is the first in our series of Single-Ended Triode **DAC**s, featuring an ultra-purist, single-stage design using large power tubes. This topology is one of LampizatOr's signature designs. Single-ended or balanced outputs are available.

Golden Gate is another LampizatOr classic, taking everything offered by the Atlantic to another level. Its Directly Heated Triodes offer the purest triode sound possible. Switchable heater current allows tube rolling across many NOS triodes, including the 45 and PX4.

Pacific was our true flagship for almost a decade. It took the Golden Gate concept to the extreme, introducing Active Anode Loading built around a military-grade Soviet tube. Now in its fifth generation, the Pacific is thoroughly field-proven, mature, and refined. It also makes a superb DHT preamplifier.

Poseidon is a preamp-**DAC** offering all the conveniences of a modern home entertainment center: digital inputs, analog inputs, impedance matching, and balanced inputs and outputs. It occupies an important position at the heart of our portfolio.

Horizon DAC is an insanely over-engineered LampizatOr masterpiece: a true demonstration of what is possible with a cost-no-object design. We made every effort to create a statement product, and it quickly became a benchmark for other top **DAC**s to aspire to. It offers virtually every conceivable input and output, with sound quality commensurate with its position in our reference range.

Aphrodite takes the Horizon philosophy even further, without the complexity of volume control. It answers the question, „What if the budget REALLY were no object?" Designed with an obsessive pursuit of the best sound in the world, it is the very definition of a flagship.

GulfStream-2 is the first all new streamer from Lampizator since we created the GulfStream-1 about 12 years ago. The popularity of internet based music streaming called for a no compromise high end machine, big and bold, capable of delivering the music in a non-digital sounding fashion, closing the gap to the reel to reel sound.

Neptune The rumours of the death of a preamplifier were premature. This vital component is still doing well and we took the best knowhow from our 20 something models of **DAC**s to create a reference tubed line stage worthy of top end amplifiers, especially solid state ones. Now with heavy class A or class D or class B - you can have the ss muscle with the beauty of tubes.

Kraftwerk-10 This is a successor of our best selling SILK mains conditioner. Now with 10 outlets, individual filters, DC blockers, power indicators and surge protectors - this is the AC mains box that will make your system sound better and work safer.

VPL Phono The family of phono stages is constantly growing, and the LITE series is a no frills group of products focused SOLELY on sound quality and not features. Just plug, forget and enjoy. Be it copper or silver variant, wether MC or MM.

VP MC-4. Our top MC Phono stage is a reference product - the result of 10 years of making phono stages with tubes and no silicon. Designed for the best, most expensive low output MC cartridges.

Passive SuperVolume control is a 4 input passive unit that has no gain stage - just the most advanced volume regulation money can buy. It is expensive but this is the cost of our no compromise approach - that will satisfy the most demanding high end crowd. We install it in our top models of **DAC**s.

InputMaster is our latest addition to the **DAC** lineup. We have put in one box everything that one needs in the digital connectivity department. Every type of input - Coax, AES/EBU, Toslink, i2S, USB - we have them all. Signals are then reclocked, filtered from noises and artefacts, buffered and cleanly sent out again to the **DAC** via i2S like HDMI or 3xBnc. The **DAC** will play much better with this device - Lampizator **DAC** or any other **DAC** you have. A solid state **DAC** card is also built in for reference.

LAMPIZATOR

WHAT WE DO:

Manufacturing of customized products

Offering an ongoing upgrade program

Excellent warranty and post-warranty service

Trade-in programs to make your next purchase easier

Free second-hand program to make buying and selling pre-owned LampizatOr products a breeze

Exhibiting at shows around the world so you can listen before you buy

One-week home trial option before you commit to your purchase

Nearly two decades of experience - we are with you all the way
